SAIFULLAH SULEMAN

Associate Business Analyst | Solution Design & Systems Integration
Karachi, Pakistan | +92 317 3818976 | imsaifq1@gmail.com
LinkedIn | GitHub | Portfolio

SUMMARY

Telecommunications engineer and MS Artificial Intelligence candidate with experience in business analysis, backend development, applied AI, data analysis and industrial AI research. Built AI-enabled applications, API integrations and ML decision-support systems, with hands-on exposure to RAG, LLM APIs, model evaluation and business workflows. Seeking an associate-level AI business solutions role focused on translating business needs into practical technology solutions.

TECHNICAL SKILLS

Business Analysis & Delivery: Requirements gathering, stakeholder communication, workflow analysis, solution scoping

Solution Design & Integration: System design fundamentals, REST APIs, data flows, SQL/PostgreSQL, IoT/edge concepts

Applied AI & ML: RAG, LLM APIs, Qdrant, scikit-learn, PyTorch/TensorFlow, model evaluation

Development & Delivery: Python, FastAPI, Node.js/TypeScript, Shopify, Docker, Git, pytest, CI/CD

Data & Analytics: SQL, Power BI, Tableau, reporting dashboards, telecommunications signal processing

EXPERIENCE

AI Research Associate | PNEC, NUST Sep 2026 - Present

Pakistan Science Foundation-funded CNC process-health monitoring research

- Curate CNC machining datasets through preprocessing, operation-wise segmentation and labeling of continuous production-cycle signals.
- Develop and evaluate PyTorch/TensorFlow models for CNC process-health monitoring; build vibration-signal inference components for integration with the project's IoT/edge architecture.

Business Solutions & Systems Design Engineer | Wisdom Tech Aug 2025 - Aug 2026

- Participated in client meetings to understand business needs, capture requirements and clarify workflows.
- Proposed practical solutions, translating business needs into application features and API integrations.
- Implemented solutions using Python, Node.js/TypeScript, PostgreSQL and Shopify; supported testing, deployment and client feedback.

Data Analysis Intern | NCBC, NED University Nov 2024 · Jan 2025

Karachi, Pakistan

- Cleaned and analyzed datasets using SQL; built Power BI and Tableau dashboards to communicate trends and performance metrics.

SELECTED PROJECTS

PDF RAG System | GitHub

- Built an asynchronous FastAPI backend for native/scanned PDFs using Tesseract OCR, Celery/Redis, Qdrant retrieval, page citations and confidence-based abstention.
- Added PostgreSQL conversations, retrieval traces, Docker, automated tests and CI gates; compared dense, hybrid and reranked retrieval across 46 synthetic regression cases (32 positive, 14 negative/no-answer).

LLM API Gateway | GitHub

- Built a provider-neutral FastAPI gateway for OpenAI and Gemini with model aliases, provider adapters, retry/timeout policies, fallback chains and standardized errors; supports structured JSON responses and embeddings for downstream applications.
- Added token/cost accounting, usage analytics and request tracing to support integration decisions; tested provider routing and fallbacks and added CI checks.

Wahab Mobiles E-commerce Platform | GitHub | Live

- Built React/TypeScript frontend (Vercel) and Fastify/PostgreSQL backend (Render) with inventory/admin tools; live catalogue lists 80+ active products. Implemented ordering workflows for upcoming launch.

Lead Scoring ML API | GitHub

- Built a scikit-learn/FastAPI methodology demo on 5,000 synthetic leads with separate train/validation/test sets, calibration diagnostics and cost-based thresholds; ROC-AUC 0.729 on 1,000 held-out test rows.

EDUCATION

M.S. Artificial Intelligence | NUST PNEC, Karachi Expected 2028

B.E. Telecommunications Engineering | NED University Jun 2026

LEADERSHIP

President, TE Links, NED University (2025-2026): Led 10+ events and 6 technical sessions.
